

Dr. Guodong Sun holds joint faculty appointment in the Department of Technology and Society of the engineering school and College of Business in Stony Brook University. He is also the founding Executive Director of New York Energy Policy Institute (NYEPI), a consortium of 16 universities and national laboratory that was established by the Governor to advise on energy issues important to New York State. An award-winning scholar in technology management, his current research focus on government championship in the technology innovation process, especially the innovation of complex products and systems. He also applies insights and tools from engineering, natural science, economics, and management science to address policy issues in energy and environmental systems. His another research area is the sustainability and resilience of energy infrastructure. He is a member of the World Energy Council (WEC) Knowledge Network on Financing Resilient Energy Infrastructure, New York Resilience Institute for Storm and Emergency. Prior to joining Stony Brook, he was a Fellow at the Kennedy School of Government of Harvard University. He received his doctorate in Engineering and Public Policy from Carnegie Mellon University, and his master's degree in System Engineering and baccalaureate in Thermal Turbomachinery from Tsinghua University.
